

The embodiments of the invention in which an exclusive property or privilege is claimed are defined as follows:

1. A method for wirelessly connecting a computer device to a server, the method comprising:

5       generating data related to the location of the computer device;  
wirelessly sending the location data to a phone number look-up device;  
retrieving at least one phone number from memory coupled to the phone number  
look-up device;  
10       wirelessly sending the retrieved at least one phone number to the computer  
device; and  
wirelessly connecting the computer device to a server using the at least one phone  
number.

2. The method of claim 1, wherein the computer device is a telematics control unit.

3. The method of claim 1, wherein the computer device is at least one of a laptop  
15 computer or personal data assistant.

4. The method of claim 1, wherein generating location data of the computer device  
comprises:

20       recording location information as spoken by a user; and  
generating location data by performing active speech recognition of the recorded  
location information.

5. A system for wirelessly connecting a computer device to a server, the system  
comprising:

a computer device comprising:

25       a location generator for generating data related to the location of the computer  
device;  
a memory for storing server phone numbers based on location;  
a processor for retrieving a server phone number from the memory based on  
the generated location data, and for generating a request that includes the  
30       generated location data if no server phone number corresponds to the  
generated location data; and

a communication device for wirelessly connecting the computer device to a server using the retrieved server phone number, and for wirelessly sending the generated request to a default phone number; and  
a phone number look-up device associated with the default phone number, the  
5 phone number look-up device comprises:  
memory for storing server phone numbers based on location;  
a communication device for receiving the request from the computer device; and  
a processor for retrieving a server phone number from the memory based  
10 on the received request,  
wherein the communication device sends the retrieved server phone number to the computer device, and the communication device of the computer device wirelessly connects to a server based on the sent server phone number.

6. The system of claim 5, wherein the computer device is a telematics control unit.

15 7. The system of claim 5, wherein the computer device is at least one of a laptop computer or personal data assistant.

20 8. The system of claim 5, wherein the location generator is an active speech recognition device for recording location information as spoken by a user, and generating location data by performing active speech recognition of the recorded location information.
